What's New in the?

This is a simple presentation applet for viewing slideshows on the Internet. The applet has a built-in text-editor and the slideshow. It has one "save as" feature for pdf, jpg, gif, tiff. The user can also "scan" the documents from which he wishes to build his presentation. The slideshow can be configured so that each page of the presentation will have a different image. The user can "zoom in" the image by clicking the mouse on it. In addition, the user can zoom out from the images or slide the whole slideshow. The user can also view images not currently in the slideshow and reposition or resize them. You can use this presentation applet to view presentations on the Internet, in the intranet or on the server. What's New in this Release: Fixed bug with "registration of imported images". Added the ability to go to the end of the presentation or the beginning when the slide with a particular image is reached. The presentation applet does not require extra plug-ins and is very light weight. If you have problems with the installation of this applet, or if you have any question about using it, please, contact us: Presentation applet is a new interactive tour for image which allows to view presentation over the internet without requiring the use of plug-ins which take forever to download.
