Creating a drawing The first step in creating a drawing is to select a template. Templates allow you to choose from a pre-made design that is most appropriate to the task at hand. Templates include a number of built-in designs or examples, such as a foundation slab, a factory floor plan, or a mechanical blueprint. After choosing a template, the next step is to create or open an existing drawing. You can create a drawing from scratch or import an existing drawing. Autodesk has provided a number of standard templates, including house plans and space plans. Templates are designed for a specific purpose, meaning they include a number of pre-defined elements and tools. For example, a construction template is meant to help you create a house plan, and includes tools such as contour lines, mark points, and framing options. The construction template also includes a full set of graphic views, including sections, details, elevations and site

This was made possible by the release of AutoCAD R2009b. The AutoCAD R2009b compiler plug-in is available for download on the Autodesk Exchange Apps, Autodesk Developer Connection (and the Autodesk Knowledge Network (Architecture and building information modeling (BIM) allows for the rapid creation of building plans and related designs. A number of plugins and third party add-ons exist, such as Google Sketchup and AutoCAD360. CAD360, developed by Autodesk, has been in development since 2003, and was first released for AutoCAD 2004.
