What's New In?

Data Protecto is a useful application for the users who need to protect their folders and files. The program allows you to create an encrypted folder on your computer in order to store the files that you want to secure. You can use the application to create a virtual wallet that can protect contact information, card data and other sensitive data. You can also hide any partition or drive, store away data for any reason you choose. You can even encrypt your backup folder or external drive to prevent unauthorized access, or to encrypt a file you want to share but not store on the hard drive. Key Features: Set the password, automatically or by hand, of the newly created encrypted folder You can select the startup folder in which the program will be configured Setting encryption option and file size Remove the configuration of data protection and the application Enabling messages when encrypting data After encryption process, the original program that is setup will be removed and Data Protecto will replace it Setup and launch configuration To launch in a separate window: Select File -> Open -> Program folder DataProtecto (encrypted by virtual wallet) To launch in the same window: Select File -> Open -> Program folder DataProtecto (encrypted by virtual wallet) Uninstallation: Download and install the program Open the Software Control Panel Select Add/Remove Programs (Windows Vista) or Programs and Features (Windows 7,8) Click the Data Protecto program Select Change/Remove Click Uninstall Restart your computer Click the Windows logo Select Settings Click Control Panel Click Add or Remove Programs Select the Data Protecto program you want to remove Click Uninstall Restart your computer Windows Update: If your computer is running Windows 10 You should check for updates Click Start Type in Windows Update Click Windows Update Click Check for updates Scroll to the bottom of the page Click Check now Restart your computer Disable the VMProtect If you use a virtual machine (VM): Disable VMProtect on the base computer Open the start menu and select Programs Click on Microsoft Windows Select Settings Select All Programs Select VMware VMProtect Click Disable Restart your computer On Windows 10: Open the system setting Click on Control Panel Click All Control Panel Items Select Device Manager Click on virtual machine monitor Disable VMware VMProtect Note: If you still have problems with your virtual machine check both the secure boot mode and secure boot
