History The area of Glenwood takes its name from Glenwood Farm. At one time the farm comprised and was renowned for its "excellent beef cattle" and the "largest Orchard of all the farms in the district". The farm was acquired by the local council in the 1920s. In the 1960s, Glenwood was known as the "French Countryside" for the "very tidy" farm landscape, the "lovely fruit trees", the "gaily-coloured" orchards, and the "spacious and attractive" houses. In the early 20th century it was a centre for the Seventh-day Adventist church. What's New In Mirage?

The goal of Mirage is to be a simple, easy-to-use program. Mirage tries to satisfy this goal by providing a stable, consistent user experience. Additionally, Mirage tries to provide an experience that is streamlined, yet comprehensive. Mirage provides a few additional features that other viewers do not. The most notable being file and flash previews. Mirage has been designed to be minimally intrusive, and also to allow it to work both in Unix and Windows environments. Mirage has been designed to be as compatible as possible with existing GTK+ applications, and it also provides support for libraries such as Nautilus, GNOME file-opening applications. Mirage is not a feature-rich application, but it has a small footprint and it takes up little space on your system. Mirage is also a fast and responsive application. Mirage includes a simple but powerful ImageDatabaseManager. It supports the simple plain text based formats of GIF, JPG, PNG, and TIFF as well as the popular ImageViewer Plus XML format. Mirage also features a powerful image editor. It can import and save images in Photoshop (.PSD) and Gimp (.XCF) formats as well as the proprietary Adobe Photoshop (.PSD) and Gimp (.XCF) formats. Mirage features

include: - A database engine allows for easy searching and sorting of images - Organize, rename, zoom, and pan images with a simple key-stroke combinations - A feature-rich image editor - Multi-threaded, multi-file image processing - File and flash previews - Dynamic loading of geotiff and geopotential files. Mirage uses the theme "Action". Mirage is built for speed. It is designed to be small and quick. For more information, see the mirage: [Mirage News](#):
