Tips & Tricks. Sage Paie V17 5 FULL Version Download. 5 VERSION FROM Sage, you can find this trial software here: the burden of mental ill health: A review of factors associated with mental health service use among HIV-positive and negative gay and bisexual men. Gay and bisexual men (GBMS) are a high-risk group for poor mental health, and this is compounded by HIV-related stigma and a lack of access to mental health services. This review aimed to identify the range of factors associated with mental health service use for GBMS with and without HIV, and to assess existing interventions for increasing their uptake of mental health services. A review of the published literature on factors associated with mental health service use and interventions for increasing mental health service uptake. Eleven quantitative and 23 qualitative studies were identified. Factors related to mental health service use were variously identified including factors associated with mental ill-health, characteristics related to the individual (e.g. bisexual, gay, education, sense of normality), and interpersonal (e.g. relationships with friends, sex life, stigma, access to mental health services) and social circumstances (e.g. friends, family). Mental health service use was most associated with self-reported poor mental

health, perceived lack of confidentiality, issues associated with stigma, and issues related to access to and quality of services. Mental health service uptake was associated with individuals' characteristics, interpersonal relationships and social circumstances. From the identified studies, only one intervention was found to have been evaluated and appeared to be effective in increasing mental health service use. The review identified a number of factors related to mental health service use among GBMS, some of which could be addressed through interventions to increase service use. However, 3e33713323
