TrustPort Management Crack Free [32|64bit] [Latest] 2022

TrustPort Management is a reliable tool designed to help you handle the security on your local network, using a suitable method. The program allows you to remotely install and configure the TrustPort software on small networks. It can generate reports, alerts and charts depicting statistical data. TrustPort Management also allows you to monitor several network events and perform mass updates on remote programs. Similarly, you can install and uninstall applications on remote stations, monitor their activity or change settings. It is a suitable tool for the management of anti-virus programs on the computers in your network, for instance in your company. TrustPort Management works as a centralizing database for storing data and settings, plus it grants you control of access permissions. The program also allows you to schedule tasks and monitor their progress. Thus, security policies, incidents, tasks or errors can easily be kept under observation. The tool comes with two components, namely the Server application and the Client. The Client package must be installed on each of the monitored computers in the network while the Server is designed for the central server system. The two components cannot be installed on the same system. The effective functionality of the program also includes a console for remote administration, which displays the statistical data charts. The Server component of TrustPort Management works as a centralizing storage utility for end stations and allows you to create the hierarchical network structure. It also collects event data, user details and activity logs, plus it can be used as a Web server for the remote management of the entire program. The Client component processes the commands received from the Server and can transmit the required information back to the central station. Through the administration console you can remotely access all server and workstation settings. TrustPort Management is a reliable tool designed to help you handle the security on your local network, using a suitable method. The program allows you to remotely install and configure the TrustPort software on small networks. It can generate reports, alerts and charts depicting statistical data.
