PortableMediaInspector is currently based on DVDraigy, and it enables to play back various protected DVD's without requiring any authentication or installation, or even getting the DVD's first (as it does not change the DVD, but it has "pockets" in which it is possible to hide the original code). The current version of PortableMediaInspector has a great advantage over the previous versions, it enables you to choose whether you want to open or to

import the video or the audio on the fly. The main advantage is that if you choose to "open" you can watch the movie first before you choose to "import", and yes, you can import several "clusters" of your favorite clips, and create your own shortcuts to them. Also, if you do not like the movie, all you have to do is to hit "P" to pause, and then you will have an option at the bottom of the screen, which enables you to restart only the audio, or to restart the whole video. All this while the program is preserving the original license of the DVD's. Similar software: No other software is similar to PortableMediaInspector, in fact, after you try it, you will understand its uniqueness. 4:38 Portable Mediainspector Portable Mediainspector Portable Mediainspector #Coding #Inspector #Mp
