If there is no authentication and the connection was established while the user was still logged in I want to make sure the connection is closed so the user is not vulnerable to DOS. So far I only found answers regarding the server side (connection blocked, disconnection request etc). A: When you need to block a socket for a given amount of time, you could set a time-out on the socket, such as `Socket sc =...; sc.setSoTimeout(5000); // block for 5 seconds`. Then when you need to tear down the socket you would call `sc.close()` to ensure immediate termination. If you need to implement more robust blocking from the client side, you could block until you receive a specific packet, and if that has not arrived after some number of milliseconds you would consider the connection to be terminated.

This is the
