New Photoshop brushes. In Photoshop CC v16.4.2. The Shape Lasso tool makes it easy to create and edit shapes. This tool can be used to draw guidelines for creating and creating shapes like boxes, polylines and circles. A Clipping Mask lets you combine images in different ways. It allows you to combine parts of one image with another. Sometimes this can be used to mask out portions of a photo to show just part of an object. Photoshop can erase certain parts of an image and leave the rest intact. This can be useful for erasing unwanted elements of a photo or to achieve a clean background for a more focused image. The Eraser tool allows you to remove specific bits of content from images. It also has a variety of settings for choosing what should be removed. Magic Eraser is a tool that works with the Transparency panel or Layer Styles panel. It lets you remove unwanted content by applying a pattern to that content, like the background behind an object. For example, you can erase a text layer over the part of the image that says "Hello!" The Healing Brush tool allows you to remove unwanted bits from an image. The Paths panel can be used to create simple geometric shapes that can then be used to modify or manipulate existing shapes. The Pen tool allows you to draw freeform shapes, lines, and boxes. This tool is very useful for creating basic shapes or lines in an image or painting on an image. Pencil tool lets you draw freeform shapes, lines, and boxes. This tool is very useful for creating basic shapes or lines in an image or painting on an image. The Pixelate filter is used to break up an image, applying a pattern that can be used as a mask on the image. It can simulate the look of mosaic art, producing a checkerboard look to an image. To create your own brush, open the Brush Panel and choose Brush. Add new brush by clicking the + icon. Click the New Brush button. You will be asked what you want to create a brush for. [Atrial natriuretic peptide attenuates endotoxin-induced acute lung injury in rats]. To explore the protective mechanism of atrial natriuretic peptide (ANP) on acute lung injury (ALI) in rats. A total of 32 normal adult male rats were randomly divided into four groups: (1) control group; (2) endotoxin-induced ALI group; (3) ANP+endotoxin-induced ALI group; (4) ANP group. Endotoxin (30 microg/kg) was injected intratracheally to induce ALI. For ANP group, ANP (50 microg/kg) was injected intratracheally 30 min before endotoxin injection. After being given endotoxin or saline injection, rats were observed for 0.5, 1, 2 and 4 h respectively. The pathologic changes of the lung were observed. The PaO2 and PaCO2 were measured. The W/D weight ratio of the lung was calculated. Compared with the control group, the level of W/D weight ratio, PaO2, PaCO2, and the wet-to-dry weight ratio of the lung were significantly increased in the endotoxin group (all P<0.05). Conclusion: ANP has a protective effect on acute lung injury induced by endotoxin. The mechanism may be related to the reduction of the level of W/D weight ratio, PaO2, PaCO2, and the wet-to-dry weight ratio of the lung. Как работать с датами в последовательном цикле?
