It provides computer-aided drafting (CAD) and visualization capabilities for producing 2D and 3D drawings for architectural and engineering projects. AutoCAD is the most popular and profitable application from Autodesk. Revenue from AutoCAD is approximately one-third of Autodesk's total revenue. AutoCAD's CAD functionality enables architects and engineers to develop accurate 3D computer models of buildings, bridges, and other structures. The use of 3D models provides the ability to create project information that is more representative of actual project conditions. This is an important advantage compared to 2D drawings, which do not accurately portray the final project outcome. The robust toolset in AutoCAD is tailored to the needs of architects, engineers, and related construction professionals. About Autodesk Autodesk makes software products to create,
