In the early 1980s, some CAD operators in the United States Army Electronic Systems Division (ESD) developed an early example of a CAD application that ran on a microcomputer and could be used by one operator working at a single graphics terminal. Unfortunately, this was the first example of a software application called CAD, not the type of CAD application that was marketed to and used by CAD operators. One of the designers of this early example of a CAD application was Albert W. Mueller, a computer engineer who was then assigned to the CAD group at ESD. ESD employed many engineers who were interested in programming. One of these engineers, John R. Gray, Jr., a computer systems expert who had just completed his doctoral work at Carnegie Mellon University, was assigned to the CAD group. Gray believed that the work he did for his dissertation demonstrated how to use a microcomputer and a graphics adapter to accomplish the tasks for which CAD operators required, and he convinced the members of the CAD group to develop a CAD application that would run on microcomputers. Gray wanted the CAD application to be easy to use. He also believed that the developers of CAD applications should be paid for their work. ESD had a grant program that was funded by the Department of Defense (DoD) called the Defense Advanced Research Projects Agency (DARPA) Microelectronics for Defense (MFD) Program. To be eligible for funding, the programs had to demonstrate that they could develop microcomputer-based CAD applications that could satisfy the requirements for certain industrial and commercial applications. The CAD group at ESD was one of the first teams that received a DARPA Microelectronics for Defense grant to develop a microcomputer-based CAD application. Gray and Mueller are credited with being the designers of the first application called EDSD CAD. After the ESD CAD group received its grant, the group set up a small design team. After about a year, the team had developed and tested an early version of EDSD CAD. They used it to produce a detailed schematic of the prototype of the first radar acquisition device that ESD planned to develop and build. The ESD team had created a prototype design that could be readily modified to meet specific requirements. The device was a miniature radar antenna with a large rectangular-shaped display screen. Gray and Mueller had developed an application called EDSD CAD that was designed to solve a specific problem for which they had already identified a solution. In contrast

This one lasts a bit longer than the one last week (not that it matters – 20 minutes is enough time for a close-up of a hooker's breasts). Another ceasefire, another "eagerly awaited" sign of "reconciliation" by the main player in the West and the belligerent regime of Bashar al-Assad. Once again, the leadership of the Free Syrian Army (FSA), the armed wing of the Syrian revolution, is lying about its intentions in order to secure the ceasefire, a common practice in Syria, that for some reason is being "misinterpreted" by the international community. This time it's the FSA who asked the Russians to put forward a resolution for the ceasefire, which would lead to a "neutral zone" in the southern part of Syria, which the FSA promised not to "cross". The FSA also asked for an end to the Russian warplanes' attacks on Syrian cities, but this is not something it can actually enforce as the FSA have no control over anything in the south. In other words, the FSA is just spinning as usual, while being careful to remove any hint of a military confrontation with the Russians. One could say the same about the UN - as usual, it "agreed" to the ceasefire but didn't even bother to officially state it, while ignoring all but one of the ceasefire terms the FSA signed. The only stipulation the UN made was that the ceasefire does not apply to any violation of the ceasefire, which is likely to be a reason why the UN has so far abstained from declaring the "ceasefire" over, even though it is a flagrant violation of all the ceasefire terms. As for the "neutral zone", it will most likely be established ca3bfb1094

Vasile II Mihalache Vasile II Mihalache (February 21, 1866 – June 3, 1916) was a Wallachian and Romanian politician. He was a member of the Party of National Unity and also of the National Liberal Party. He was also a graduate of the Facultatea de Filosofie, which he attended from 1881 to 1884. Early life He was born in the village of Mihăliași in Buzău County, the third son of Barbu, a publican, and Maria, daughter of I. Crișan, a merchant and publican. He studied philosophy and philology in the Gheorghe Lazăr University, Bucharest. He graduated in 1884 and began work in a Bucharest bookstore, Apulum. Political career Mihalache joined the Liberal Party in 1887, when he was still a student. He was a correspondent for the newspaper Adevărul in 1888-1889. Mihalache went to war as a volunteer, being wounded in 1891. In 1892, he was elected in Buzău County Council and later became the councilor for Poenari. In 1894, he ran as a candidate for the Senate of the United Principalities, for the Wallachian constituency in Bucharest. Mihalache took his seat in the Senate in 1897. He became an associate member of the Romanian Academy in 1897. He became the chief editor of the Adevărul weekly in 1900. Mihalache was one of the national politicians in the Romanian National Party (PNR) formed in 1899 by his friend and university professor Ionel Pop. When Ionel Pop died in 1903, Mihalache became the main leader of the National Liberal Party. He was elected for a brief period as a senator of the Kingdom of Romania in the Romanian National Party legislative election of 1910. Death
