How Photoshop Works Photoshop is based on a layered approach in which different layers are overlayed to alter the content of each layer. Photoshop uses pixels to define its layers and pixels to define content within layers. That is the basis for how Photoshop works, and it is also the basis for why Photoshop is so powerful. Most Photoshop users work in the "standard" view, in which there are eight layers stacked on top of each other. There is a background layer, which is the bottom layer and has a white background. Next is the image or photo layer, which is the top layer, so it is visible as the background. From top to bottom, these are the most important layers: • The Background layer • The Image layer • The Layers palette • The Image-editing tools in the tools palette • The Channels palette and the Levels tool • The History and the Fades tool • The Paths tool If you're unfamiliar with layers and image editing in Photoshop, it's a good idea to take the free trial to get a feel for how layers work in Photoshop. There are various tools that allow you to easily customize your canvas. One of the most powerful tools in Photoshop is the Pathfinder. The Pathfinder allows you to combine and cut various layers. Once a layer is selected, you can use the selection tool to cut out the selected layer. The eraser or scrubby tool allows you to clean areas of an image where you previously painted or added a layer. You can press CTRL + X on a layer to make a copy of the layer and then press CTRL + J or delete a layer to completely remove it. Photoshop allows you to change the size, texture, and color of a layer or any object. Here is a short list of useful Photoshop features: Background Blending: The type of blending you apply to the background of your image determines how the background takes on the characteristics of other objects and images you may be working with. You may use a blend if you are creating a composite, wispy background. You may use a soft light blend if you want your background to appear soft and hazy. You may use a hard light blend if you want to add a gentle, glowing effect to your image. Blend Modes: The blend modes are the ways you can change the overall characteristics of a layer. You can select a layer or all selected layers and then select the Blend or Normal option in the Background Blending section of the Layer menu. This is the most basic setting for your background, and allows you to control the overall brightness and transparency. There are many blend options to choose from: Multiply (reds) Screen (blues) Hard Light (blues) Soft Light (blues) Darken (greens) Lighten (greens) Dodge (greys) Burn (greys) A favorite of most users, Dodge and Burn are perfect for creating a focused subject with a bright background. This layer is created by pressing CTRL + J, then choose Dodge or Burn from the Layer menu. When you select one of these two options, the tool makes a hard or soft outline around your subject. Courier New: When you type text, you may want to know how it will be displayed on the web. The font in your image may not be readable. To make it readable, set your text to Courier New and you will be able to see the type at a much smaller size. Before the type appears
