3. **Create a new document.** Press **Ctrl+N** (on the Mac) or **Cmd+N**. After the New dialog box appears, specify the **4** × **6** inch document by filling in the Width and Height boxes. Check the **Background** box and ensure that the **Layer** box is selected. **Figure 4-2:** Start a new document for your Photoshop project. 4. **Use the Rectangular Marquee tool (M)** to select the top edge of the document. 5. **Press and hold the Ctrl (on the Mac) key** and then drag down toward the bottom edge of the document. 6. **Select the Move Tool.** 7. **Move the cursor to the right**, as shown in **Figure 4-3**. 8. **Click with the right mouse button**, and then drag the cursor. 9. **If desired, press the T key** and select **Save As** and then give the new document a new name. You may find it much more convenient to name a file and then open it from the Auto-Save feature instead of having to return to your file every time you want to save a project. 10. **Use the Clipping Tool (C)** to define a new layer and then add some color. The addition of layers enables you to apply multiple edits or adjustments to the same image. The Layers panel enables you to toggle layers on or off. Create a new layer and make it visible, and then use a paint bucket or any other tool to add a color to the document. 11. **Save the new image.** Save the image under a new name. The File Save dialog box (see **Figure 4-4**) should open, and you should be prompted to save the file. You can also use the **Save image as** menu at the top of the Layers panel. **Figure 4-3:** Pick a folder for your new file. **Figure 4-4:** Save your image. Before you leave the library, you need to make sure that your Layer List is empty. If you make a mistake and try to edit the Layer List, you end up with a lot of items in the Layers panel, making it a bit difficult to manage your project. (You can clean it up with the Keyboard Shortcut **Command+L**).

This is a list of tools that Photoshop users have added to the more common tools for modifying images in Photoshop. Those photos PicTouch “This works in the same way as picnic, only you can use a photo as a brush and use a photo as an eraser. It’s great for touchups, special effects, and sometimes when you want to apply a blur.” [via] Dust Nukes “What Dust Nukes! Also great for dust & scratch removal. I use them all the time.” [via] Glass texture TextureBrush “TextureBrush makes any texture look like wood, brick, glass or anything else. As you can see it has a layer mask so you can hide parts of the texture and is a great painting effect for photos.” [via] Hairs Cloning brush “This brush looks like a cloning brush but you can adjust the size, the way the hairs grow (random or single direction) and adjust the color of the hairs.” [via] Hair brush “The best way to create the perfect, naturally-looking hair in just a few seconds. This brush is perfect for manga, comics, cartoons, or any other kind of art.” [via] Mix “Mix is a brush preset (maybe the most powerful preset ever) that can be used as both a brush and a stylus. It can be used to create rich textures (especially those with a little bit of noise), to fake more and more organic stuff (just like a real mix), and to create the perfect glowing effect. It works great for professional imagery as well as on patterns, PSDs, and any other raster graphic.” [via] Pencil brush “This brush looks exactly like a real pencil sketch. With it you can draw perfectly visible shapes in any image.” [via] Painterbrush “I use this brush to create an illusion of a painter’s stroke. It looks cool on top of any drawing, painting, comic, and so on. It’s also a very common brush for creating the grunge effect.” [via] Paint brush “You have lots of options with this brush. You can draw with it like a normal 05a79cecff

Peptide ligands with anti- and pro-bacterial properties from a phage display library of antigens. A phage display random peptide library was screened by ELISA against three prototype serotypes of pneumococci. Two peptides (pneumococcal B and pBH25) were shown to bind specifically to the pneumococci. These peptides have been expressed in Escherichia coli as fusion proteins with glutathione S-transferase. Immunoprecipitation analysis showed that each peptide bound to a specific pneumococcal surface antigen (Spa). Competition experiments using antibodies against the two major surface antigens of Streptococcus pneumoniae indicated that the two peptides bound to different regions of the Spa adhesin. The peptide pBH25 inhibited the adherence of pneumococci, whereas the peptide pBH09 was shown to enhance the adherence of the organism to human epithelial cells. Local leaders say 'swatting' incidents are growing, led by the Shreveport area. In the Shreveport area alone, a grandmother was killed recently when she was swatted by her son-in-law while trying to help him. In Kansas, the Kansas Bureau of Investigation sent out a press release saying swatting was on the rise. In January, 60 calls were made in just one day. "We have received multiple threats regarding the incident in Shreveport and we are closely monitoring to see if and when it happens again," an FBI spokesperson said. Q: Pushing items from array inside object to new array I have an array that I am using to send a message to different devices using WebRTC, the push method works fine to just add the array to a new array. My question is how can I move all items from the array1 to array2 without having to mutate anything? function pushToArray2(array1, array2){ return array1.map(function(element, index) { return [element.id, array2]; }); } var array1 = [{ "id": "1" }, { "id": "2" },
